

# TinnGO

*TinnGO is a three years research project, funded in the context of the HORIZON 2020 Programme of the EU, aiming to create a framework and mechanisms for a sustainable game change in European transport, through a transformative strategy of gender and diversity sensitive smart mobility.*

The geographic coverage of the TinnGO project is pan-European and in this context, a network of **10 national hubs** has been established.

The [TinnGO Observatory](#) coordinates and leads the Scandinavian, the UK, the Spanish, the Portuguese, the Italian, the Greek, the French, the German, the Romanian, and the Baltics Hubs.

The Hubs promote gender smart mobility by building the capacity to generate and apply evidence on issues relating to gender equality and transport, by highlighting case studies of women leaders in smart mobility and by developing gender and diversity sensitive smart mobility solutions through associated idea factories, called **Transport Innovation Gender Labs** (TinnGIdLabs).
