

Book Launch and Seminar

Place: Danro Conference Room, Rue du Trône 98 / 8 floor, B-1050 Brussels

About the book

The book considers gender perspectives on the implementation of digital technologies and smart solutions to effectively provide 'mobility for all' in urban spaces. It does so while attending to the agenda of creating green and inclusive cities. It deals with the conceptualization, design, planning and execution of these fast emerging 'smart' solutions.

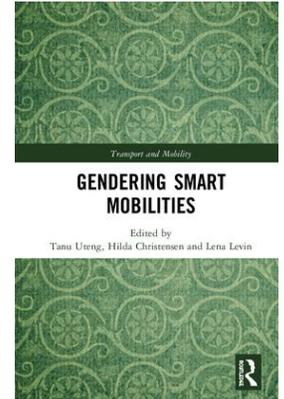

Authors from a range of disciplinary backgrounds have contributed to this book, designed to converse with mobility studies, transport studies, urban-transport planning and engineering, human geography, sociology, gender studies and other related fields.

The book fills a substantive gap in the current gender and mobility discourses and will thus appeal to students and researchers studying mobilities in the domains of transport-urban planning, social, political and environmental science
